

CAPABILITY STATEMENT

Secure software development | security assurance | workflow automation
DAS WORLD WIDE LLC d/b/a Forge Honor Assurance

SAM REGISTERED

UEI RC58FNM51SE5
CAGE 08P68
Active thru 2027-05-25

Practical technical assurance for software teams and public-sector buyers.

Forge Honor Assurance is an owner-led consulting practice focused on secure software delivery, code review, technical risk reduction, and workflow modernization.

ENGAGEMENT FIT

Small secure applications, internal tools, vendor security reviews, codebase modernization, workflow automation, reporting dashboards, and remediation support where buyers need clear written deliverables instead of vague advisory work.

CORE COMPETENCIES

- Secure web applications, APIs, internal tools, and database-backed workflows.
Security audits, code review, dependency review, authentication and authorization review.
Workflow automation for intake, routing, records processing, quality checks, and operational reporting.
Document and data processing pipelines that extract, normalize, summarize, and route work into usable dashboards or reports.
Cloud and deployment review: IAM, secret handling, CI/CD, environment separation, and operational hardening.
Compliance readiness support: evidence inventories, vendor questionnaires, technical policies, runbooks, and remediation tracking.
Legacy modernization, integration work, and engineer-facing documentation that reduces maintenance risk.

DIFFERENTIATORS

- Builder plus reviewer: findings are written by someone who understands production constraints and can help land the fix.
Owner-led accountability: one point of responsibility for scope, communication, quality, and delivery.
Evidence-first reporting: clear findings, reproduction notes, business impact, and prioritized remediation guidance.
Automation-aware delivery: repeatable workflows, checks, and reports are favored over one-off manual heroics.
Small-team fit: useful for primes, agencies, and vendors that need a focused specialist without a large consulting footprint.

REPRESENTATIVE DELIVERABLES

- Security review report with executive summary, prioritized findings, evidence, and remediation guidance.
Working internal tool or automation workflow with deployment notes, access model, and operating runbook.
Architecture or cloud review memo with trust boundaries, risk register, and next-step remediation plan.
Compliance readiness packet: evidence map, questionnaire support, policy/runbook drafts, and closure tracker.
